Beskrivning

Författare: Fredrik Gustafsson.

This book contains a comprehensive set of exercises and can be used along with the textbook *Statistical Sensor Fusion* by Fredrik Gustafsson. The chapters of these two books are aligned, so that each chapter in the textbook corresponds to a chapter of the exercises. The book contains both traditional pen and paper exercises and practical tasks to be solved in Matlab. The exercises deal with both theory and applications, and many of the problems examined in the exercises come from or are inspired by real-life sensor fusion challenges, in several cases with real datasets.

The book homepage contains more information and links for accessing datasets and Matlab functions: www.studentlitteratur.se/sensorfusion

Bakgrund: Reaktiv hyperemi definieras som ett övergående ökat blodflöde över det normala efter en tids ischemi. Det kan registreras med laserdopplerteknik. Att registrera reaktiv hyperemi är ett sätt att värdera mikrocirkulationen. Det finns många flödesvariabler att studera varav tid till maxflöde efter ocklusion är en. Det har.

There are many different parameters of a ski running surface (material, roughness, hydrophobicity, etc.). All the parameters have an influence on ski glide, some more and some less. Furthermore, some parameters with only minor relevance are commonly declared as critical, while truly critical parameters, as far as we know.
